COMPETENCIAS

BASIC COMPETENCES

- CB6: Possess and understand knowledge that provides a basis or opportunity for originality in the development and/or application of ideas, often in a research context.
- CB7: Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
- CB8: That students are able to integrate knowledge and face the complexity of making judgements based on incomplete or limited information, including reflections on the social and ethical responsibilities linked to the application of their knowledge and judgements.
- CB9: Students are able to communicate their conclusions and the ultimate knowledge and rationale behind them to specialist and non-specialist audiences in a clear and unambiguous way.
- CB10: Students possess the learning skills that will enable them to continue studying in a largely self-directed or autonomous way.

GENERAL COMPETENCES (CG)

- CG1: Be able to work efficiently in a team in their professional or research work, acquiring the ability to participate in research projects and scientific or technological collaborations.
- CG2: To be able to make quick and effective decisions in complex situations in their professional or research work, through the development of new and innovative work methodologies adapted to the scientific/research, technological or professional field in which they carry out their activity.
- CG3: Be able to access the necessary information in the specific field of the subject (databases, scientific articles, etc.) and have sufficient criteria for its interpretation and use.
- CG4: Apply critical reasoning and argumentation based on rational criteria.
- CG5: To apply science from a social and economic point of view, promoting the transfer of knowledge to society.
- CG6: Ability to prepare, write and present reports and projects in public in a clear and coherent manner, to defend them with rigour and tolerance and to respond satisfactorily to any criticism that may arise from their presentation.

SPECIFIC COMPETENCES (CE)

- CE1: To have an in-depth knowledge and understanding of the nature of biodiversity and its ecosystemic relationships both now and in the past.
- CE2: To understand the nature of the fossil record in relation to the sedimentary process, the biostratigraphic and palaeogeographic phases of the process and the mechanisms of fossilisation.
- CE3: To know and understand the palaeodiversity of living beings, their ecosystemic relationships and the palaeogeographical distribution achieved by the main groups of living beings throughout the Earth's history.
- CE4: To know, understand and draw conclusions, applicable to the present time, about the crises of biological diversity, its causes and consequences within the framework of actualism.
- CE5: To understand in depth the historical nature of the evolutionary process, both in its aspects of unrepeatability and contingency, and in those linked to the fulfilment of laws of nature of all kinds and, therefore, of necessity.
- CE6: To know and understand past biological events, as well as the zonation, in time and space, of biota in order to establish the relative stratigraphic position of sedimentary rocks from different geographical areas.
- CE7: Know and be fluent in the divisions of the geological time scale, and the biostratigraphic scales constructed from different groups of biota in the fossil record.
- CE8: To be able to interpret environmental and ecological variables of the past from the study of trace organisms in the fossil record.
- CE9: To understand the nature of the stratigraphic record, its discontinuities, cycles and events, the different types of sedimentary basins, the factors controlling their infilling, the resulting three-dimensional geometries and stratigraphic correlations.
- CE10: To know the fundamental principles of facies analysis in continental, transitional and marine depositional systems, and the use of fossils for the palaeoenvironmental interpretation of the stratigraphic record.
- CE11: Collect, represent and analyse data for the interpretation and realisation of geological mapping and/or other modes of representation (stratigraphic columns, geological slices, etc.) with a view to their implementation in reports, scientific publications or other outputs.
- CE12: To know and understand in depth the regional geology of Spain and peripheral areas, and in particular of the Valencian Community, knowing in detail the main palaeontological landmarks represented in the deposits of the Iberian Peninsula and North Africa.

- CE15: Know and understand the causes of climate change and the proxies (diatom studies, foraminifera, tree growth rings, ice cores, current climate data, etc.) used to characterise past climates.
- CE16: Know and understand the fundamentals of the use of microfossils and macrofossils for the characterisation of geological deposits containing resources such as oil, gas, coal, peat, etc.

- CE17: To know and understand the legal foundations at EU, Spanish State and Autonomous Community level on the protection and conservation of palaeontological heritage.
- CE18: To learn about the techniques used in museums for the management of palaeontological heritage, distinguishing successful cases in the field of palaeontology (Dinópolis, Institut Català de Paleontologia, Museo Paleontológico de Elche).
- CE19: To prepare, in a clear and concise manner, all types of reports related to palaeontological topics at an official or professional level (reports, subsidies, heritage impact reports, research projects, etc.).
- CE20: Be able to apply the research experience acquired in their own professional work, both in private companies and in public bodies.
- CE21: To carry out studies, applying the necessary methods and techniques to conserve and manage palaeontological heritage.
- CE22: Be able to plan and manage the available resources, taking into account the basic principles of quality, risk prevention, safety and sustainability.
